Global footprint

We have a global network of skilled professionals, delivering on our reputation for integrity and assurance.

## Sectors and markets we operate in:

 <p>Infrastructure</p>	 <p>Industrial and manufacturing</p>	 <p>Government</p>
 <p>Mining</p>	 <p>Power</p>	 <p>Oil and gas</p>

## Our values

### Care

Working safely with integrity, respecting and valuing each other and our communities.

### Commitment

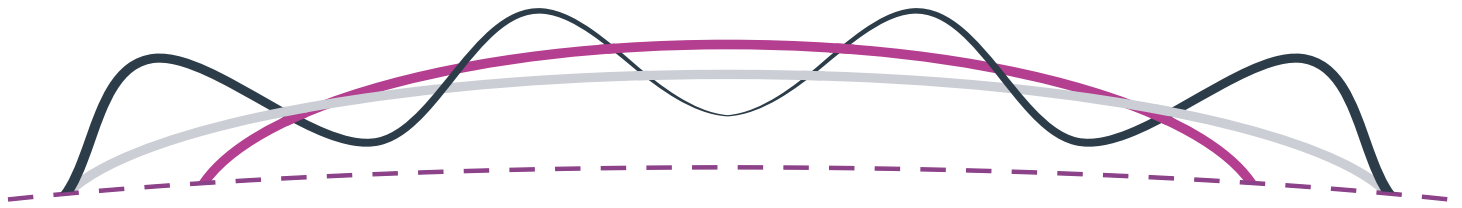

Consistently delivering to all our stakeholders.

### Courage

Pushing the boundaries to create smarter, more sustainable solutions.

We provide asset support and specialist services to help customers across any market worldwide.

## Life cycle support

**Comprehensive life cycle services support your asset from development to decommissioning. We have evolved these services across many industries so we can confidently offer a sector agnostic approach, applying our capabilities to any asset in any industry.**

### Capital Projects

Wood's capability covers any large scale project from world class new build facilities to complex brownfield modifications. We bring high quality engineering discipline knowledge to deliver innovative conceptual designs, well considered FEED projects and robust engineering solutions. Integrated disciplines allow any variation of design, build and install with fully managed solutions offering complete assurance and project certainty.

### Operations solutions

Our experience is built on a solid reputation for successful, responsible operations. We have a fully scalable service across operations, maintenance and modifications, able to take on small scale repairs, high risk modifications and duty holder commitments with the same level of professional dedication. Through our extensive operational competence we provide long term asset integrity and assurance.

## Sector specific knowledge

**Core capabilities blended with sector specific experience. To enhance our life cycle support, we bring strong asset familiarity from key sectors to help embed our capabilities more deeply and integrate our delivery with the specific needs of the industry.**

### Clean energy solutions

We bring technical and operational knowledge to hydro, nuclear, solar, wave and wind providers. Global experience has seen us supporting more than 40% of the world's wind farm capacity, helping developers to manage and optimise their assets. We support the nuclear industry worldwide, helping to develop tomorrow's power sources.

### Mining and minerals solutions

From early analysis and geological studies to processing, optimisation and handling we have worked on a huge variety of mine types. Our resource knowledge covers base materials, industrial minerals and precious metals.

### Subsea and export systems

With extensive experience and in-depth knowledge of marine and coastal infrastructure we are very well placed to support any equipment that works in or under the water. Risers, pipelines, jetties and terminals are all areas where we have led the world in design, delivery and operation.

## Specialist expertise

**Deep technical knowledge enhanced with specialist and consulting services. Complementing every stage of the asset life cycle our specialist expertise brings additional insights, problem solving and niche technical capability.**

### Environment and infrastructure solutions

Helping customers assess and reduce their impact on the environment through comprehensive analysis, remediation and monitoring.

### Digital and technology

Dedicated to solving tomorrow's challenges with creative ingenuity. Our digital teams are developing solutions to connect, inform and improve.

### Automation and control

With cross sector experience and outstanding technical knowledge we can confidently support any scale of project from discrete process automation to full systems integration on complex production lines and major new turnkey facilities.

### Consulting

We deliver differentiated technologies, services, licensor activities and proprietary equipment to support customers with their strategic investments. Highly technical teams provide the specialist knowhow and due diligence to make assured decisions on performance, integrity and optimisation.
